ASSET/STOCK AND INVENTORY MANAGEMENT SYSTEM

IMMIGRATION & CITIZEN AUTHORITY

1. OVERVIEW

Immigration Citizen Authority Papua New Guinea is looking to develop a secure, self-hosted web-based Asset Management System. ICA will have a wide range of assets, including physical facilities, operating resources, services, ICT infrastructure, and student support services.

SoftLogic.AI is an AI technology development company building cutting-edge technology products for start-ups as well as enterprises.

The client ZYNTRIX, in collaboration with Softlogic are exploring option to collaborate and develop a secure web-based asset management system together. For the same, we have created this scope of work document to highlight its understanding of the solution and propose a development plan.

Key Goals & Features

The proposed Asset Management System (AMS) for ICA PNG is intended to provide a secure, web-based platform for the effective management, monitoring, maintenance, and tracking of organizational assets in line with sound governance practices. The system will strengthen accountability, transparency, and oversight across key operational areas, including office assets, vehicle assets, building management, and ICT infrastructure. It is designed to support compliance, improve internal controls, enhance operational efficiency, and enable informed decision-making across the Authority

The system will provide centralized asset and stock registration, real-time inventory visibility, lifecycle tracking, stock movement monitoring, maintenance scheduling, and reporting capabilities to improve operational efficiency, accountability, and governance. Key features include cloud-enabled infrastructure, role-based access control, encrypted data transmission, automated backups, and system monitoring to ensure reliability and security.

The solution will support stock control functions such as item categorization, quantity monitoring, reorder level management, issuance and receipt tracking, location-based inventory control, and audit trails, while also enabling controlled user access and structured reporting to strengthen accountability and asset visibility. In line with similar implementations, the system will also include maintenance support, performance monitoring, vulnerability assessment, and disaster recovery mechanisms to ensure continuous, accurate, and secure system operations.

Toystack's Asset360

Types of Assets Supported

Digital & IT Assets

- Laptops, servers, networking equipment, peripherals, and licenses.
- Track assignments, lifecycle events, upgrades, depreciation, and compliance readiness.
- Detect idle, overused, or non-compliant assets automatically.

Physical & Operational Assets

- Machinery, tools, equipment, office furniture, and facility assets.
- Monitor location, usage, maintenance history, and condition over time.
- Reduce downtime through proactive maintenance visibility.

Mobile & Distributed Assets

- Vehicles, logistics equipment, field assets, and shared resources.
- Enable real-time tracking, movement history, and accountability across locations.
- Prevent loss and misuse across distributed teams and sites.

Asset360 is built to understand the nuances between different asset types—so every asset is tracked, maintained, and optimized the right way, across its entire lifecycle and operational context.

Key Summary – Types of Assets Supported

Digital & IT Assets

Includes laptops, servers, networking devices, peripherals, and software licenses.

Enables lifecycle tracking such as assignment, upgrades, depreciation, and compliance.

Identifies idle, overused, or non-compliant assets automatically.

Physical & Operational Assets

Covers machinery, tools, equipment, office furniture, and facility assets.

Tracks location, usage, maintenance history, and asset condition.

Supports proactive maintenance to reduce downtime.

Mobile & Distributed Assets

ASSET/ INVENTORY / STOCK CONTROL SYSTEM

24TH April, 2026

Includes vehicles, logistics equipment, field assets, and shared resources.

Provides real-time tracking, movement history, and multi-location accountability.

Helps prevent asset loss and misuse across distributed teams.

ASSET/ INVENTORY / STOCK CONTROL SYSTEM

24TH April, 2026

Overall:

The system manages different asset categories across their full lifecycle, ensuring visibility, maintenance, and operational efficiency.

2. COST ESTIMATION

Product Description	Price Per Unit Excl. GST	Quantity	Total Buy Price Excl. GST
			-
Inventory Management /Asset / Stock Control	42,000.00	1	42,000.00
Asset / Stock Control / inclusive Installation and implementation / Training			-
			-
Standard Plan 1 Year 5 Web users	718.75	5	3,593.75
•Asset registration •Asset tracking • Asset transfer •Fixed reader integration •Reports • Dashboard • Data Upload/download Module • New Asset Creation • Asset verification & QR Code			-
Annual maintenance support - As in scope to this agreement only. Recurring annually	84,000.00	1	84,000.00
			-
			-
			-
			129,593.75
	Total GST Incl		142,553.13

Commercial Terms

Pricing and Currency

All quoted prices are expressed in Papua New Guinea Kina (PGK)

1. Payment Terms

Payment shall be made 100% upfront upon contract confirmation prior to project commencement, unless otherwise agreed in writing. Annual Support maintenance is paid in lieu annually

2. Scope Limitation

The quoted cost covers only the services and deliverables defined within the agreed scope of work. Any additional requirements or enhancements will be treated as a variation and quoted separately.

3. Variation and Change Requests

ASSET/ INVENTORY / STOCK CONTROL SYSTEM

24TH April, 2026

Any modifications, upgrades, or additional features requested during the project shall require written approval and may incur additional charges.

4. Exchange Rate Impact

Where third-party services, software licenses, or infrastructure costs are influenced by international suppliers, exchange rate fluctuations may impact final pricing. Similarly, the annual recurring cost for support will be amended accordingly

5. Support and Maintenance

Ongoing maintenance, support, upgrades, or system enhancements beyond the agreed contract period will be subject to a separate service agreement.

6. Client Responsibilities

The client shall provide necessary system access, technical coordination, and timely approvals required to ensure smooth deployment and implementation of the solution.
